Course

### Computer Basics

In this course we're going to challenge what it means to be digitally literate by pulling back the curtain of how computers work. By the end of this...

### How the Internet Works

Track

## Digital Literacy

Digital literacy covers basic computing principles and foundational knowledge of the Internet and World Wide Web. In this collection of courses you'll start by learning the basics of how computers work. Next, you'll dive into the infrastructure of the Internet and get familiarized with a high level overview of how the World Wide Web works. In the second half of the track you'll practice using three web languages HTML, CSS, and JavaScript; learning by playing with code. Some of the projects you'll work on include a personal web page, a sound board application with picture buttons, and a randomized future telling game.
